SUMMARY

Senior AI and ML Systems Architect with 8+ years of experience designing secure, scalable AI platforms in enterprise environments processing high-volume transactional data. Specialized in distributed ML systems, Kubernetes-native orchestration, multi-cloud architectures, and Generative AI (LLMs, RAG, agentic workflows). Strong focus on MLOps, IAM-based access control, auditability, and operational resilience. Experience deploying and managing containerized workflow automation systems (n8n) on cloud infrastructure with secure API and LLM integrations. Immediate joiner.

TECHNICAL SKILLS

AI/ML: LLMs, RAG, LangChain, LangGraph, LangSmith, Langfuse, DeepEval, Embeddings, Semantic Search, Hybrid Retrieval, Reranking, Prompt Engineering, Model Monitoring

Cloud & Infra: Azure (AKS, App Services), AWS, Kubernetes, Docker, Terraform

Data & Backend: Python, SQL, Kafka, Redis, PostgreSQL, FastAPI, Django, API Development, Webhooks

Vector Databases & Search: Pinecone DB, Vector Search, Metadata Filtering, Document Chunking, Retrieval Pipelines

MLOps: CI/CD, MLflow, IAM, Audit Logging, Encryption, SLA Monitoring

EXPERIENCE

Independent AI Engineer | *Independent AI Engineer*

Remote | Oct 2025 – Present

- Provided end-to-end consulting and hands-on delivery for AI systems, RAG chatbots, and multi-agent applications using Python, LangChain, LangGraph, and FastAPI, while building a portfolio of AI projects, technical explorations, and open-source contributions.
- Projects: raunaqness.com/projects
- GitHub: github.com/raunaqness

Aptos India | *Machine Learning Engineer*

Bangalore, India | Jan 2023 – Sep 2025

Project: Aptos One – Enterprise Unified Commerce Platform serving 100+ global retailers and processing billions of transactions annually.

- Architected a Kubernetes-native ML orchestration control plane enabling workload-aware scheduling, checkpoint-based recovery, and distributed job lifecycle management in SLA-bound production environments.
- Designed secure, fault-tolerant data pipelines on GCP (BigQuery + event-driven workflows), implementing IAM-based access controls, encryption practices, and audit logging while improving processing SLAs by 35%.
- Optimized cloud infrastructure and query execution strategies, reducing compute costs by 60% (about USD 240K annual savings) while modernizing legacy systems into scalable, observable cloud-native components.
- Technologies: Python, GCP, Vertex AI, BigQuery, Kubernetes, Docker, Terraform, Redis, CI/CD, IAM

Project: Generative AI & LLM Support Assistant

- Designed an enterprise-grade RAG architecture integrating structured analytics metadata and internal knowledge bases to deliver context-aware responses with improved semantic accuracy.
- Implemented prompt versioning, evaluation workflows, and monitoring mechanisms to reduce hallucinations by 35% while improving traceability and observability of model outputs.
- Deployed containerized inference workflows using MLOps practices, enabling controlled experimentation, scalable inference, and secure knowledge isolation via vector database access controls.
- Technologies: Python, LangChain, LangGraph, Vertex AI, VectorDB, FastAPI, Docker, MLOps

Turing.com | *Senior Software Engineer*

India (Remote) | Apr 2022 – Dec 2022

Project: End-to-End ML Deployment Platform

- Designed and implemented production-grade ML pipelines using Airflow for ingestion, training, validation, and automated deployment.
- Standardized CI/CD and model versioning practices, reducing deployment time by 60% and improving controlled production rollouts.
- Integrated monitoring and validation checks to enhance production reliability and maintainability of deployed ML systems.

- Technologies: Python, Django, Airflow, GCP, Docker, MLOps

Clickpost Pvt. Ltd. | *Senior Software Engineer*

Bangalore, India | Jul 2018 – Apr 2022

Project: Cash Reconciliation Automation Platform – serving 1,000+ enterprise customers handling high-volume CoD transactions.

- Designed and built a high-accuracy financial reconciliation system processing large-scale transactional datasets with strict data integrity and traceability requirements.
- Reduced reconciliation cycle time by 95% (from about 2 days to minutes) through parallelized processing and automated validation workflows, improving operational efficiency and financial visibility.
- Architected secure ingestion pipelines and scalable backend APIs under high-availability constraints, ensuring auditability and controlled access to financial data.
- Technologies: Python, Django, PostgreSQL, AWS, Redshift, Kafka, Docker, Kubernetes

PROJECTS

Scratchpad – Agentic AI Brainstorming and Content Creation

- Agentic AI software for brainstorming ideas and creating content online. Built with LangChain, LangGraph, LLMs, Deep Agents, Langfuse, and DeepEval.
- Github: <https://github.com/raunaqness/scratchpad>
- Try it: scratchpad.raunaqness.com

FluxBox – macOS Productivity Menu Bar App (Rust + Tauri)

- Ultra-lightweight macOS menu bar utility with real-time market tickers, currency conversion, world clocks, hardware monitoring, and Claude API usage tracking. Built with Rust and Tauri for near-zero resource footprint.
- Github: <https://github.com/raunaqness/fluxbox>

TVBox – Personal Self-Hosted Streaming Platform

- Personal, self-hosted Netflix-style platform for searching movies and TV shows, managing downloads from one dashboard, moving files to Google Drive, and watching them through Infuse. Built with Docker Compose, Python, and rclone.
- Try it: tvbox.raunaqness.com
